Frequently Asked Questions

Install Font:

Install IOS (Apple)

Fonts can be installed in several folders in OS X, but we recommend that you do the following: First, close any open applications. Newly installed fonts may not appear in your font menu if you ignore this step.

Install using Font Book:

- Double click the unzipped font file and Font Book will open a preview of the font.
- Click “Install Font” at the bottom of the preview.

Manually install:

- Open Finder and click the Go menu at the top of the screen.
- While in the Go menu, hold down both the Alt/Option and Shift keys on your keyboard to reveal the hidden link to the Library folder
- Navigate to your Fonts folder: /Users/Your_Username/Library/Fonts
- Drag and drop the unzipped font files into this folder.

Install Windows (Microsoft)

Windows 10

- Unzip the folder containing the fonts first. Fonts cannot be installed if they are zipped.
- Right-click the font file and select **Install**.

OR

- Search for **Fonts** in the search box by the start menu.
- Click on the **Fonts (Control Panel)** link to open the Fonts Manager
- Drag and Drop or Copy and Paste the unzipped fonts into the Fonts Manager to install.

Windows 8

- Unzip the folder containing the fonts first. Fonts cannot be installed if they are zipped.
- Right-click the font file and select **Install**.

OR

- Go to search in the start menu.
- Search for **Fonts** in settings.
- Click on the **Fonts Folder** to open the Font folder.

- Drag and Drop or Copy and Paste the unzipped fonts files into the Fonts folder to install.

Header and Footer

The **slide master** is one of the template parts that not only modify the main design, open the additional slides but also numbered pages, change or add the required logo, title, website address, and phone number.

If you are using the Apple Keynote View > Edit Master Slide or If you are using the Microsoft Powerpoint View > Slide Master.

Download and Insert Image

As you buy templates, template photos are mostly for commercial purpose so it will not be part of the purchase. Those photos are free to use in a template or downloaded from free picture stock websites such as Free stock photos. **You can download free photos from websites too.**

Slide master gives you a chance to insert a photo. So you could insert all kinds of photos in a certain place. As you insert a photo, you can use **Drag and Drop or Click to replace Image function.**

Use Icon

Icon Font is essentially the same as a script font. Font Icon should also be installed as the script font. Font Icon is solved as a single icon for each letter of the font. Templates are usually used with Icon Fonts because it is much easier to use. Also, the template comes with the necessary Font Icon file (+1000, +5000 icon's).

*Font icon is used with a **copy to paste** command.*

Edit Chart

It is common to display numerical data in the **CHART** and **INFOGRAPHIC**. This is the best and appropriate solution. The **DATA CHART** has the advantage that it can change the numerical value, as well as a direct result will be illustrated immediately. In other words, the **CHART** is changed when changing the numerical value based on the table **(excel table)**.

To edit a DATA CHART in the Apple / Keynote, you can use the **EDIT CHART DATA** at the bottom of the CHART. (Activate Chart which you want to edit).

But in the case of Microsoft Powerpoint click **CHART DESIGN> Edit data in excel** to enter a value. (Activate Chart which you want to edit)

THANK YOU FOR WATCHING
